INTRODUCTION:

Equipped with a CCNP certification, you are ready to manage today's complex networks - whether its working with core technologies, optimizing infrastructure, or keeping key applications secure and performing efficiently.

COURSE OUTLINE

1.ROUTE: 300-101

- Implement an EIGRP based solution, given a network design and a set of requirements
- Implement a multi-area OSPF Network, given a network design and a set of requirements
- Implement an eBGP based solution, given a network design and a set of requirements
- Implement an IPv6 based solution, given a network design and a set of requirements
- Implement an IPv4 or IPv6 based redistribution solution, given a network design and a set of requirements
- Implement Layer 3 Path Control Solution

2.SWITCH 300-115

- Implement VLAN based solution, given a network design and a set of requirements
- Implement a Security Extension of a Layer 2 solution, given a network design and a set of requirements
- Implement Switch based Layer 3 services, given a network design and a set of requirements
- Prepare infrastructure to support advanced services
- Implement High Availability, given a network design and a set of requirements

3.TSHOOT: 300-135

- Maintain and monitor network performance
- Troubleshoot Multi Protocol system networks
